PROFILE

Courteous and enthusiastic, I am interested in IT and everything in its orbit. After working as a Tech support executive and later as a software tester for some time, I began to be fascinated by web-programming e.g. developing apps and building websites. Building state-of-the-art, easy to use, user-friendly websites and applications is truly a passion of mine and I am confident I would be an excellent addition to your organization. In addition to my knowledge base, I actively seek to learn new technologies and stay up-to-date on industry trends and advancements. I strive to keep learning new technologies and to stay ahead of the curve so I can deliver exceptional work all the time. Able to build a Web presence from the ground-up -- from concept, navigation, layout and programming to UX and SEO using HTML, CSS and Javascript.

I have a strong IT background with my Bachelors Degree in Computer Application and since the field of web development complements my studies, I am keen to gain more experience in the field. For this reason I am looking for a company willing to offer me a position as a junior frontend developer. In return, I would offer my full commitment, and be a pleasant and friendly addition to your team.
